

Product: JETi-3300, JETi-5000 & JETi UV Flatbed
Application: Production of Indoor and Outdoor Display Graphics
Printhead: Spectra® S-Class
Ink Type: Solvent & UV curable
Jets Per System: Up to 3072
Printhead Features: High Sustained Throughput, Non-stop Operation

customer profile

Headquarters - Toronto, Canada

JETi-3300

JETi UV Flatbed

"I've been designing and building high performance printers for quite some time now. I've had considerable experience evaluating and implementing other head types and supporting these heads in the field. Using Spectra printheads is a decision I have never regretted in all aspects."

*James Gandy
Founder & President, GANDINNOVATIONS*

GANDINNOVATIONS is a relative newcomer to the large format digital display printing market. However, its roots run deep as a pioneer in the design, development and manufacturing of precision large format digital printing systems. Long-time industry veteran, James Gandy, has built his new company with a focus on converting traditional printing applications like silkscreen and sign making over to digital fabrication methods. GANDINNOVATIONS picks up where his earlier firms Signtech and Salsa left off.

The company's current product line includes the JETi 3300, a 3.3-meter wide roll-to-roll printer using 12 Spectra printheads and the JETi 5000, a 5-meter super wide roll-to-roll printer with 18 Spectra printheads. These are both solvent ink based units. The newest addition to the product line is the JETi UV Flatbed, a 1.5 by 3-meter high-speed flat bed printer that uses 24 Spectra printheads.

The JETi UV Flatbed is the first printer from GANDINNOVATIONS to support UV inks and rigid media. Increasingly, printers and fabricators are looking to differentiate their capabilities by offering a broader range of output capabilities such as imaging onto metal, wood and glass in addition to the more traditional materials such as vinyl, canvas and other flexible synthetic materials.

GANDINNOVATIONS is headquartered in the Toronto area in a state of the art 65,000 square foot facility. In addition to accommodating design, development and manufacturing, this site also has a modern well lit demonstration area, where customers come to evaluate the printers using their own work.

Spectra printheads are used exclusively for GANDINNOVATIONS entire JETi line. The choice of printheads was driven by the need to support multiple ink types, to jet at high-sustained frequencies and the need for a printhead with proven reliability.
