NX-Pro Toucan

"Our relationship with Dimatix goes back several years, at the time we considered several options but chose Dimatix for its extensive product range, its ability to accommodate our present requirements and its flexibility to address our ongoing needs. We are very pleased with this relationship."

*Guy Cipresso,
Vice President and General Manager, Mutoh America*

Mutoh Industries, Ltd. was founded in 1952 in Tokyo, Japan, to manufacture and distribute mechanical drafting products. Over the years Mutoh introduced a broad line of flatbed and roll-fed pen/pencil plotters that established them as a worldwide leader in X-Y motion systems and printer and plotter technology. Today, they are one of the world's foremost manufacturers of large format piezoelectric printers.

Mutoh manufactures printers and related peripherals for some of the biggest names in the pre-press, sign and graphics industries. They have key engineering, manufacturing and distribution centers in Japan, Belgium and Phoenix, Arizona and maintain ISO9000-certification at their facilities.

Mutoh has developed one of the most complete product lines in the display graphics industry. Mutoh can address diverse customer requirements for both indoor and outdoor applications, from the most demanding, high volume industrial applications to light duty on-demand printing. Their broad range of products is subdivided into 5 categories: sign plotters, printers for indoor applications, outdoor solvent-based printers, eco-solvent printers and other peripheral devices.

The NX-Pro Toucan is a family of solvent-based printers designed for signage and other applications. The Toucan family is comprised of three models with various throughput parameters and 4- or 6-color support. The unit has a width of either 64- or 87- inches. Mutoh recently announced the addition of the Toucan Hybrid to their Toucan line of printers. The Hybrid can print on both rigid and roll-to-roll substrates.

The Toucan has the ability to print onto a wide selection of uncoated media with low ink consumption and the output can withstand harsh outdoor conditions. The Toucan utilizes the latest developments from Mutoh in motion control and sophisticated media handling. Dimatix's extremely durable and reliable, drop-on-demand piezoelectric ink jet printheads are used in the Toucan family.

Mutoh and Dimatix have been working together for many years and its relationship continues to be strong.
